# Chief Technology Officer

*Tunetap — A farmer's market for a world of music*

Tunetap is a community-driven music discovery and sharing platform. Our mission is to liberate human creativity by removing friction and increasing personal engagement. In this first phase of our business, we're creating an incredibly easy way for artists to upload their work, receive metrics about fan engagement, and reward top fans. Music lovers are encouraged to share and buy, through either the website or dedicated mobile apps, and may be rewarded by the artist for doing so. Our team is mostly comprised of Cornell students.

The Chief Technology Officer is a fusion of technical ability and leadership prowess. The CTO will lead a team to develop, test, and maintain our web and mobile platforms. The CTO must be able to make product (front-end) and technical (back-end) decisions to best suit our users' technical capability and the needs of our business. This role is based in the United States.

## Responsibilities

- Design and shape product vision alongside CEO
- Establish and enforce timelines and budgets along with founders
- Lead developers and designers, and work alongside them, to build and test product
- Ensure consistency of experience for users and as much uptime as possible
- Recruit developer and designer talent, as needed
- Develop and maintain internal tools for team operations and business functions

## Requirements

- Fluent in modern web technologies, including HTML5, CSS3, and Javascript
- Experience with Rails, native iOS, Android, Windows, and OS X—the more, the better!
- Drive and ability to learn, explore, and use new technologies
- Familiarity with git (Github) and coding in a team environment
- A drive to create great user experiences and an eye for detail
- Ability to use available data to make decisions, or to gather more data to make decisions

## Desirables

- Strong background in Computer Science or Information Science
- Internship or experience designing and building intuitive UIs with an emphasis on UX
- Ability to understand and develop user metrics and analytics
- Experience designing and building data visualization for metrics and audio

At the moment, this position is unpaid. There is the potential, but not the promise, of pay and/or non-salary incentives, including equity or commission, depending on the performance of our team. In addition, this role is on a temporary basis at the discretion of the employer and the employee.

Come build something amazing. Send an email to **thetap@tunetapmusic.com** and tell us about yourself. Attach or link your resume, portfolio, or anything else that might be relevant. Let us know if someone referred you to this position. We'll be in touch!
